Probability of a single event

1

A bag holds 2 red, 5 blue and 3 green counters. One counter is taken at random. Find P(blue).

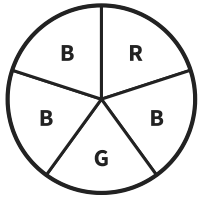

$$P(\text{blue}) = \frac{\text{number of ways it can happen}}{\text{total number of outcomes}} = \frac{\quad}{10}$$

Answer _____

2

This fair spinner has 5 equal sections. It is spun once. Find P(B).

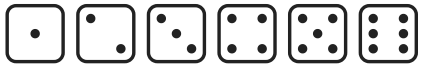

$$P(B) = \frac{\text{number of ways it can happen}}{\text{total number of outcomes}} = \frac{\quad}{\quad}$$

Answer _____

3

A fair dice is rolled once. Find P(a number less than 3).

$$P = \frac{\quad}{\quad}$$

Answer _____

4

These cards are shuffled and one is taken at random. Find P(8).

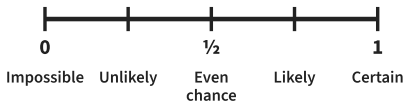

$$P(8) = \frac{\quad}{\quad}$$

Answer _____

5

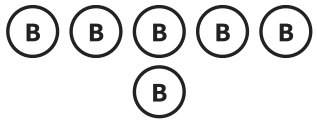

A bag holds 1 red counter and 4 blue counters. One is taken at random.
(a) Find P(red). (b) Mark P(red) on the probability scale with an arrow.

(a) _____

6

A bag holds 6 blue counters and nothing else. One is taken at random.
Find (a) P(blue), (b) P(red). Write a word for each from the probability scale.

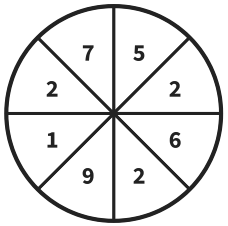

(a) _____

(b) _____

7

This fair spinner has 8 equal sections.
Find (a) P(2), (b) P(an odd number).

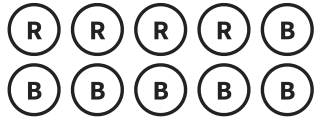

(a) _____

(b) _____

8

A bag holds 4 red counters and 6 blue counters. Ravi says P(red) = $\frac{4}{6}$.
Explain Ravi's mistake. Then find P(red).

_____

_____

P(red) = _____

Probability of a single event *further practice*

9

A pot holds 4 black pens, 8 blue pens and 3 red pens. Sam takes a pen at random. Find the probability that it is black.

Answer _____

10

A fair dice has 8 faces, numbered 1 to 8. It is rolled once. Find the probability of a multiple of 3.

1	2	3	4	5	6	7	8

Answer _____

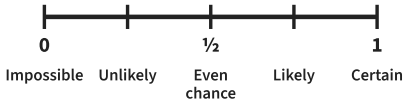

11

Mark each of these on the probability scale with an arrow and its letter.

A: a fair coin lands on tails.

B: a fair dice lands on a number less than 7.

C: a spinner with 4 equal sections, 3 of them red, lands on red.

12

Which is more likely: rolling an even number on a fair dice, or taking a red counter at random from a bag of 3 red and 5 blue counters?
Show how you know.

Answer _____

13

A school sells 120 raffle tickets.
Amir buys 6 of them. One ticket is picked at random to win the prize.
Find the probability that Amir wins.

Answer _____

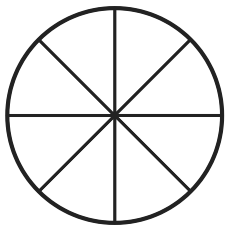

14

A bag holds 12 counters. Some are red and the rest are blue. One is taken at random. P(red) = $\frac{1}{4}$. How many red counters are in the bag?

Answer _____

15

Write R, B or G in each section of this spinner, so that P(R) = $\frac{1}{2}$ and P(B) = $\frac{3}{8}$.
Use G for every other section.

16

A bag holds 1 red counter and 9 blue counters. Ella says, "The counter is either red or not red, so P(red) = $\frac{1}{2}$."
Is Ella right? Explain.

Answer _____
